

**ESD-approved products**  
**SP Swedish National Testing and Research Institute**

The technical requirements for each product type are to the highest possible extent identical to requirements established by applicable international standards. Unfortunately the standards are not in all parts consistent, have full coverage, etc., why some requirements have had to be altered, supplemented or deleted. The adherence/deviations to standards are explained for each type of product in SP-Method 2472, clause 7.3 and respective appendix.

Generally, it is possible to claim that an "ESD-approved" product fulfils the basic requirements of IEC 61340-5-1 and EN 100015-1.

**ESD-approval DNo: 230-02-0059**

**Holder of the approval**

TriboTec AB, Sweden

**Date of issue**

2002-06-25

**Approval valid until**

2005-06-25

**SP Test Report**

F2 09609

**Conditions**

SP-Method 2472

**Marking**

ESD-approved products shall be marked according to SP-Method 2472, section 6.3. Ericsson-approved packaging material shall additionally fulfil requirements according to Ericsson's document 125 23-LXE 107 268 Uen

**Other information**

The material is approved as Class B, i.e. as low charging material within EPA
